# temperature

# JOFRA calibration

#### » Wide temperature range

 MTC-140 A
 -17 to 140°C / -1 to 284°F

 MTC-320 A
 33 to 320°C / 91 to 608°F

 MTC-650 A
 33 to 650°C / 91 to 1202°F

#### » Fast calibration is timesaving

The specially designed heating block profile heats up to  $320^{\circ}$ C /  $608^{\circ}$ F in just 4 minutes and to  $650^{\circ}$ C /  $1202^{\circ}$ F in only 10 minutes

#### » High flexibility

Not limitations by fixed holes. Interchangeable insertion tubes are used to match the diameter of the sensor-under-test

#### » Enhanced stability

MVI circuitry ensures stability despite mains supply variations in the engine room environment

#### » Timesaving features

Fast one-key-one-function access to the automatic switch test and auto-stepping

#### » Documentation made easy

RS232 communication interface and JOFRACAL calibration software package are part of the standard delivery

#### » DNV approval

All JF Instruments calibrators are marine type approved by Det Norske Veritas

#### » Complete marine program

Part of a complete program of marine approved temperature, pressure and signal calibrators; including temperature sensors

# Marine Temperature Calibrator **MTC series**

The MTC series of portable temperature calibrators facilitates correct readings on all of your temperature monitoring devices. The MTC dryblock design does not use any hazardous hot liquid and heats up and cools down much faster than traditional ways of calibrating temperature sensors on a vessel. You can reach 320°C (608°F) in just 4 minutes and do it safely.

#### Maintain and calibrate monitoring devices for:

- Turbo-charger lubrication
- Fuel oil inlet
- Exhaust gas
- Crankcase protection
- Turbine and gear bearings
- Steam
- Servo oil propeller pitch
- Purifiers
- Starting air
- Hydraulic systems
- Oil burner
- Generators
- Safety valves
- Cylinder/piston/fuel valve cooling media
- Thrust/shaft plane/stern tube bearings

- Lubricating oil systems
- Scavenge airSea water cooling
- Sea water cool
  Charge air
- Charge a
- Uptake gas
- Feed water
- Cooling water outlet
- Refrigeration systemsGland steam
- Condensing system
- Main steam
- Condensers

ISO 9001 Manufacturer

Specification Sheet SS-MTC

The MTC series features a large backlit display that is easy to read even in well-lit areas. Units feature an informative display that provides icons and information regarding the status of the MTC and the calibration in-progress. The MTC series also features an auto-step function. Using this function you may stay in the control room or on the bridge and monitor the temperature reading while the calibrator, located in the engine room by the sensor, automatically steps through a number of pre-programmed temperatures.

#### Fast heating and cooling

The MTC-320 A and the MTC-650 A contain an innovative heating block profile. This design heats up the MTC-320 A to maximum temperature in just 4 minutes and the MTC-650 A in only 10 minutes. The fast performance of the heating block is due to the special profile that minimizes mass and yet, still accepts an insertion tube with a 1 in (26 mm) outer diameter. This design is a balanced compromise between temperature stability, homogeneity, and rapid heating and cooling.

#### MTC-140 A heating/cooling block

The model MTC-140 A features Peltier elements. In 1834, Jean Peltier, a French physicist found that an "opposite thermocouple effect" could be observed when an electric current was connected to a thermocouple. Heat would be absorbed at one of the junctions and discharged at the other junction. This effect is called the "PELTIER EFFECT".

The practical Peltier element (electronic heating pump) consists of many elements of semiconductor material that are connected electrically in series and thermally in parallel. These thermoelectric elements and their electrical interconnections are mounted between two ceramic plates. The plates serve to mechanically hold the overall structure together and to electrically insulate the individual elements from one another.

#### **MVI** - Improved temperature stability

MVI stands for "Mains power Variance Immunity". Unstable mains power supplies are a major contributor to on-site calibration inaccuracies. Traditional temperature calibrators often become unstable in shipboard environments where large electrical motors, heating elements, and other devices are periodically cycled on and off. The cycling of supply power can cause the temperature regulator to perform inconsistently leading to both inaccurate readings and un-stable temperatures.

The MTC series calibrators MTC-320 A and MTC-650 A employ the MVI, thus avoiding such stability problems. The MVI circuitry continuously monitors the supply voltage and ensures a constant energy flow to the heating elements.

The MTC-140 A does not require the MVI circuitry because the Peltier elements are energized with a stabilised DC voltage.

#### Easy-to-use, intuitive operation

All instrument controls may be performed from the front panel. The heat source is positioned away from the panel. This design helps to protect the operator.

The main functions on the MTC series are designed with one-key-one-function logic. This means that there are no sub-menus or difficult to remember multiple keystrokes necessary to access primary functions.

The easy-to-read, backlit display features dedicated icons, which help in identifying instrument conditions and operational steps.

#### Set temperature

The ''Up'' and ''Down'' arrow keys allow the user to set the exact temperature desired with a resolution of  $0.1^{\circ}$ C or °F.

#### Instrument setups

The MTC series stores the complete instrument setup, including: engineering units, stability criteria, resolution, display contrast, slope (ramp) rate, auto-step settings, and maximum temperature.

#### **Stability indicator**

The bold checkmark ( $\sqrt{}$ ) on the display indicates that the calibrator has reached the desired set temperature and is stable. The operator may change the stability criteria and establish a greater sense of security in the calibration results. A convenient countdown timer is activated five minutes before the unit reaches stability.

#### Automatic switch test

Operators can save a lot of time using the automatic thermoswitch test function to find values for the "Open" and "Close" temperatures. Additionally, this feature displays the hysteresis (deadband) between the two points. The feature ensures a very high repeatability when testing thermo-switches. Simply press the SWITCH TEST key to activate the function.

#### **Auto-stepping**

This feature saves manpower. The operator may stay in the control room, or on the bridge, monitoring the output from the sensor-under-test while the MTC series calibrator is placed in the engine room and automatically changes the temperature using a programmed step value and rate. Up to 9 different temperature steps may be programmed, including the hold time for each step.

This feature is also ideal for burning-in new sensors prior to installation; this minimizes initial drift and allows for initial testing.

#### Maximum temperature

From the setup menu, the user can select the maximum temperature limit for the calibrator. This function prevents damage to the sensor-under-test caused by the application of excessive temperatures. The feature also aids in reducing drift resulting from extended periods of exposures to high temperatures. This feature can be locked with an access code.

#### **Re-calibration/adjustments**

The MTC series has a very easy and straightforward procedure for re-calibration/adjustment. There is no need for a screwdriver or PC software. The only thing you need is a reliable reference thermometer.

Place the probe in the calibrator and follow the instructions on the display. Third-party labs and calibration facilities will be able to perform this function if a certificate from an independent source is necessary. Of course, AMETEK can provide you with a traceable calibration certificate from our labs when you require a higher level of confidence.

#### **JOFRACAL CALIBRATION SOFTWARE**

JOFRACAL calibration software ensures easy calibration of RTD's, thermocouples, transmitters, thermoswithes, pressure gauges and pressure switches.

JOFRACAL can be used with JOFRA DPC-500, HPC and IPI pressure calibrators, all JOFRA temperature calibrators, as well as JOFRA AMC900, ASC300 multi signal calibrator and ASM-800 signal multi scanner. When used with JOFRA ASM-800, JOFRACAL can perform a simultaneous semi automatic calibration on up to 24 pressure and/or temperature devices under test in any combination.

JOFRACAL software controls the complete calibration procedure, stores the results and provides a calibration audit trail through hard-copy certificates. All calibration data are stored for each sensor to monitor drift and optimise recalibration intervals. A scheduler feature allows planning of future calibrations.

#### Switch input (dry contact)

Test voltage	Maximum 5 VE	C
Test current	Maximum 2.5 m	hΑ

#### Engine rooms - testing the temperature in exhaust gas

# Savings

The exhaust gas temperature is a very important factor. If the temperature is too low, too little fuel is let into the cylinder, and if the temperature is too high, too much fuel is let into the cylinder.

Often a range of  $\pm 10^{\circ}$ C (50°F) is allowed, before an alarm is activated. However, if calibration is performed more often, this range could be reduced and a more economical combustion could be achieved.

Engine rooms - testing the temperature in exhaust gas

# Application

On each cylinder, a thermometer has been placed close to the exhaust gas outlet to measure the temperature of the exhaust gas. This thermometer breaks very often due to the impact from the exhaust gas. As a consequence the temperature indication is often inaccurate. The thermometers most frequently have a scale from 350 to 450°C (662 to 842°F).

# **KEY FEATURES**

#### Automatic switch test

Finds switching temp	Open, close, hysteresis
Slope rate, programable	0.1 to 9.9 °C/°F

### Auto stepping

Programmable	Up to 9 steps
Dwell time on each step	Programmable

#### Enhanced stability

Unstable mains protection	MVI Circuitry
Stability indication	Yes, in display

#### Multi-information display

Stability indicator	Bold checkmark
Countdown timer before stable	e4 minutes
Temperature SE	T and READ simultaneously
Alphanumeric messages	Yes
Calibration status icons	Yes

#### Training mode (heating/cooling block disabled)

#### Service facilities

Adjustment of the unit from the keypad	Yes
Self explanatory guide in display	Yes

Other information: Displays serial number, software revision level, and last calibration date

#### Setup facilities

Stability criteria	Extra time before "stable indication"
	is shown
Display resolution	0.1° or 1°C/°F
Temperature units	°C and °F
Slope rate	0.1 to 9.9°/minute
Maximum temperature	Any value within range

#### Type approval certifcate

All JF Instruments calibrators are type approved by Det Norske Veritas. Find the certificate at our web-page www. jofra.com

DNV Marine Approval, Certificate no.:....A-10549

# **PHYSICAL SPECIFICATIONS**

#### Instrument dimensions

L x W x H:.....241 x 139 x 325 mm / 9.5 x 5.5 x 12.8 in

#### Instrument weight

MTC-140 A	6.5 kg / 14.3 lb
MTC-320 A	5 kg / 11 lb
MTC-650 A	6.4 kg / 14.1 lb

# Insert dimensions

MTC-140 A

Diameter x length ...... 19 mm x 100 mm / 0.75 x 3.9 in MTC-320 A, MTC-650 A

#### Weight of non-drilled insert (approximate)

MTC-140 A	2.6 oz / 75 g
MTC-320 A	5.8 oz / 170 g
MTC-650 A	17.8 oz / 510 g

Use of other inserts may reduce performance of the calibrator. To get the best results out of the calibrator, the insert dimensions, tolerance and material is critical. We highly advise using JOFRA inserts, as they guarantee trouble free operation.

#### Marine approved temperature sensors

JF Instruments also has a series of temperature sensors which are type approved by classification societies for

marine applications such as measuring exhaust gases, cooling water for diesel engines, and product or room temperatures in refrigeration stores. These sensors are specially designed with high enduance for vibration according to IEC 68-2-6. Approvals from Lloyds Register of Shipping and Det Norske Veritas. For further information please visit our web-page at www.jofra.com

#### Inserts, heat shield, and cleaning brushes

Always use the original inserts where material and physical dimensions have been optimized. A drilling guide is included if you buy undrilled inserts. Use the cleaning bru-

shes to clean the bores in your inserts when necessary.

#### Carrying case (Optional) - 123408

The protective carrying case ensures safe transportation and storage of the instrument and all associated equipment. The carrying case is included in the standard delivery.

#### **Thermal Protection Shield (Optional) - 104216**

An external heat shield is available and may be placed on top of the calibrator to reduce the hot air stream around the sensor-undertest. This is especially important for testing thermocouples having head-mounted transmitters with cold-junction compensation.

#### Support rod set for sensors (Optional) - 125068

It is possible to order a support rod for sensors, which can be mounted on the side of all JOFRA dry-block calibrators and holds the sensors under test in their position, while calibrating them.

The support rod set includes 2 pieces of sensors grips and 2 pieces of fixtures for sensor gribs.

125066 Extra fixture for sensor grib 125067 Extra sensor grib

# **PREDRILLED INSERTS FOR MTC SERIES**

Inserts for MTC-140 A and MTC-320 A are made of aluminium. Inserts for MTC-650 A are made of brass.

All specifications on hole sizes refer to the outer diameter of the sensor-under-test. The correct clearance size is applied in all predrilled inserts.

#### AMETEK Test & Calibration Instruments

A business unit of AMETEK Measurement & Calibration Technologies Division offering the following industry leading brands for test and calibration instrumentation.

#### **JOFRA Calibration Instruments**

Temperature Calibrators Portable dry-block calibrators, precision thermometers and liquid baths. Temperature ranges from -90°C(-130°F) to 1205°C(2200°F). Temperature sensors for industrial and marine use.

Pressure Calibrators

Convenient electronic systems ranging from -25 mbar to 1000 bar - fully temperature-compensated for problemfree and accurate field use.

Signal Instruments Process signal measurement and simulation for easy control loop calibration and measurement tasks.

#### M&G Pressure Testers & Pumps

Pneumatic floating-ball or hydraulic piston dead weight testers with accuracies to 0.015% of reading. Pressure generators delivering up to 1,000 bar.

#### Lloyd Instruments

Materials testing machines and software from Lloyd Instruments guarantees expert materials testing solutions. The comprehensive program also covers Texture Analysers to perform rapid, general food testing and detailed texture analysis on a diverse range of foods and cosmetics.

#### Davenport Polymer Test Equipment

Allows measurement and characterization of moisturesensitive PET polymers and polymer density.

#### Chatillon Force Measurement

The hand held force gauges and motorized testers have earned their reputation for quality, reliability and accuracy and they represent the de facto standard for force measurement.

#### Newage Testing Instruments

Hardness testers, durometers, optical systems and software for data acquisition and analysis.
