ASHCROFT®
Trust the shield.™

A-Series Miniature Watertight Pressure Switches

FEATURES

- Compact size
- 316 SS construction
- Pressure ranges from vacuum to 15,000 psi
- Factory set or field adjustable setpoints
- Wide operating temperature range (–40°C to 100°C)
- Precision snap-acting micro switch
- SPDT or DPDT switching
- UL, CSA listed models
- CE and ROHS compliant
- CRN models available (up to 10,000 psi)
- SIL 3 capable

TYPICAL USES

- Offshore oil rigs
- Chemical and petrochemical plants
- Pulp and papermills
- Autoclaves and sterilizers
- Rail and heavy vehicles
- Specialty machinery and equipment

A-Series
Watertight Pressure Switch

SIL 3 CAPABLE

SPECIFICATIONS

Setpoint:	Single setpoint - Factory set or field adjustable
Setpoint Repeatability:	±2% of span. For ranges 200 through 15,000 psi ±5% of span. For ranges -15/15 through 100 psi (additional setpoint shift ±2% of span per 40°F from initial setpoint setpoint at 70°F typical)
Vibration:	Passed Mil-STD-202G
Shock:	75G's 10 milliseconds 3 axis
Piston:	SS w/Viton or Buna-N O-ring
Mechanical life piston design:	>1,000,000 operations typical
Diaphragm:	316L SS
Mechanical life diaphragm design:	>400,000 operations typical
Switch Type:	SPDT or DPDT
Deadband:	Fixed
Enclosure Ratings:	NEMA 6, IP67
Enclosure material:	316L SS
Pressure Connection:	⅛ NPTF, ¼ NPTF, ¼ NPTM, ⅛ NPTM, ½ MNPT, ½ FNPT, 7/16-20 SAE M, VCR, VCO, ¾″ Tri-Clamp®, 1.5″ Tri-Clover®, 2.0″ Tri-Clover, G¼ B, G¼ A Type E Stub end
Electrical output:	SPDT, or DPDT 5A or 3A 120Vac, 2A @ 30Vdc, gold contacts available
Approvals:	UL, CSA, CE, CRN, SIL 3 capable, RoHS

KEY BENEFITS

- **High performance**
- **Small size**
- **Special connections**
- **Easily configurable to meet your application requirements**
- **SIL 3 capable**

OPTIONS

Code	Description
C4	Individual certified calibration chart
FP	Fungus proofing
MQ	Positive Material Identification (75, 15 & 20 process conn. only)
NC	2 wire leads w/ground wire – wired for normally closed operation
NO	2 wire leads w/ground wire – wired for normally open operation
NH	SS tag
NN	Paper tag
6B	Cleaned for oxygen service
GO	No ground wire

A-Series Miniature Watertight Pressure Switches

ORDERING CODE Example:	APS	N4	1	H	012C	S	02	30#	15	R	X6B
Function											
APS - Pressure switch, single setpoint, fixed deadband, factory set, not field adjustable	APS										
APA - Pressure switch, single setpoint, fixed deadband, factory set, field adjustable											
Enclosure											
N4 - Watertight 316 SS body		N4									
Micro Switch, First Character											
1 - Single switch, SPDT			1								
2 - Dual switch - DPDT (Not available with "S" actuator < 100 psi, range)											
Micro Switch, Second Character											
G - Gold contact - 0.1A @ 125 Vac, 0.1A @ 30 Vdc											
H - High current - 5A @ 125/250 Vac, 5A @ 28 Vdc resistive, 3A @ 28 Vdc inductive				H							
L - High current, gold contact - 1A @ 125 Vac, 1A @ 28 Vdc resistive, 0.5A @ 28 Vdc inductive											
P - General purpose - 3A @ 125 Vac, 2A @ 30 Vdc											
Electrical Connection											
000H - Micro DIN connector - Watertight DIN 43650 Form C cable socket without mating connector, not available with DPDT switching, (not UL approved)											
00MH - Micro DIN connector - Watertight DIN 43650 Form C cable socket with mating connector, not available with DPDT switching, (not UL approved)											
000N - Nonstandard, customer specified, see # variation											
000T - Spade Terminals, 4 - 0.187" male spade - not available with DPDT switching											
___C - ½ NPT Male conduit with 18 AWG wires (Note ___ e.g. 012C = 12″ lead wires, Specify wire length in inches)					012C						
___L - Wire leads, 3-18 AWG PVC insulated wires (Note ___ e.g. 012L = 12″ lead wires, Specify wire length in inches)											
___G - M20 X 1.5 male conduit connection with 18 AWG wires (Note ___ e.g. 012G = 12″ lead wires, Specify wire length in inches)											
___K - M20 X 1.5 male conduit connection with 4 conductor jacketed cable with 18 AWG wires (Note ___ e.g. 012K = 12″ lead wires, Specify wire length in inches), not available with DPDT switching											
___J - ½ NPT Male conduit connection with 4 conductor jacketed cable with 18 AWG wires (Note ___ e.g. 012J = 12″ lead wires, Specify wire length in inches), not available with DPDT switching											
Actuator Seal (see page 6 for more information)											
B - 316 SS piston & Buna-N® O-ring, ranges ≥ 100 psi											
V - 316 SS piston & Viton® O-ring, ranges ≥ 100 psi											
S - 316 SS welded diaphragm, ranges ≤ 200 psi						S					
N - 316 SS piston & HNBR O-ring, ranges ≥ 100 psi											
Process Connection											
01 - ⅛ NPT Male											
02 - ¼ NPT Male							02				
03 - ⅛ NPT Female (not available for B, V, N actuators)											
04 - ½ NPT Male											
05 - 7/16-20 SAE Male											
06 - VCR fixed (not available for B, V, N actuators)											
07 - VCO fixed (not available for B, V, N actuators)											
08 - 7/16-20 SAE Female											
12 - G ¼ A (Type E Stud End)											
13 - G ¼ B											
25 - ¼ NPT Female (not available for B, V, N actuators)											
50 - ½ NPT Female											
46 - 9/16-SAE Female											
76 - 7/16-20 SAE w/37° flare end											
75 - ¾ Tri-Clamp® connection (includes 3A approval), range ≤ 1,000 psi											
15 - 1½ Tri-Clamp® connection (includes 3A approval), range ≤ 1,000 psi											
20 - 2.0 Tri-Clamp® connection (includes 3A approval), range ≤ 1,000 psi											
Ranges (See table on page 3 for additional ranges)											
30 psi								30 psi			
Setpoint											
5 Characters maximum representing setpoint of the switch in the same units as the ranges of the switch. For setpoints in vacuum specify as "-" pressure. If no set point is required on an APA switch use either "NSR" or NSD". If direction is not known use "NSR" as default									15		
Setpoint Direction											
R - Rising pressure (increasing pressure, decreasing vacuum)										R	
D - Decreasing pressure (decreasing pressure, increasing vacuum)											
Options - Select from table on page 3 (If choosing an option(s) must include an X")											X__
6B - Cleaned for oxygen service											6B

A-Series Miniature Watertight Pressure Switches

SELECTION GUIDE

Before selecting a switch the following should be considered:

Actuator:

The actuator responds to changes in pressure and operates the micro switch element in response to these changes. The actuator is normally exposed to the process media and must be chemically compatible with it. There are three types of actuators available for the A-Series switches – all welded 316 SS diaphragm sealed piston; 316 SS piston with Viton O-ring seal; and 316 SS piston with Buna-N O-ring seal. The 316 SS diaphragm is available in ranges from –15/15 psi to 200 psi. The 316 SS piston is available in ranges from 100 psi to 15,000 psi. Switches offered in 100 psi and 200 psi can be ordered with either the piston or diaphragm design. The piston design will have a longer mechanical life, while the diaphragm design has a better operating temperature.

The piston design is more reliable than a diaphragm design when subjected to frequent large pressure excursions, pressure surges and spikes associated with typical hydraulic applications. Piston designs are typically used when the switch is used as low pressure alarm or cutoff where the normal working pressure is above the nominal range of the switch.

The Switching Function:

Most applications for alarm, shutdown and interlock are satisfied by the standard A-Series switches which feature single setpoint fixed deadband. For pump, compressor and other control applications, the dead-band becomes a very important consideration and may require increasing the range of the switch to increase the deadband. Please consult your Ashcroft representative for assistance with special applications.

The Micro Switch Element:

The micro switch element must be chosen to meet the electrical load requirement to be switched. The switches are offered as either SPDT (single pole double throw) or DPDT (double pole double throw). The DPDT switch is made up of two SPDT switches which are adjusted to work together by Ashcroft's patent pending Circuit Board Rotation Design. DPDT switching is not available on diaphragm designs below 100 psi, with Spade terminals or the Micro DIN connector.

Understanding Setpoints and Reset Points:

Pressure switches can be set to switch on either increasing (rising) or decreasing pressures. Since the switches have both Normally Open (NO) contacts and Normally Closed (NC) contacts you can wire the switch to open or close for either an increasing or decreasing pressure. To be consistent in setting the switches Ashcroft defines the setpoints as follows. For an increasing setpoint, the pressure is increased from 0 psi to the set point and then decreased to the reset point. For a decreasing setpoint, the pressure is increased to full range and then decreased to the setpoint and then increased to the resetpoint.

Custom Applications:

The A-series switch is designed to allow custom process connections and electrical terminations. Please consult your Ashcroft representative for assistance with custom applications.

A-Series Miniature Watertight Pressure Switches

ADDITIONAL SWITCH TERMINOLOGY

Accuracy – (See repeatability) Accuracy normally refers to conformity of an indicated value to an accepted standard value. There is no indication in switch products; thus, instead, the term repeatability is used as the key performance measure.

Automatic Reset Switch – Switch which returns to normal state when actuating variable Pressure is reduced.

Adjustable or Operating Range – That part of the nominal range over which the switch setpoint may be adjusted. Normally about 10% to 100% of the nominal range for A-Series pressure switches.

Burst Pressure – The maximum pressure that may be applied to a pressure switch without causing leakage or rupture. This is approximately 16X of nominal range for A-Series switches. Diaphragm switches subjected to pressures above the nominal range can be permanently damaged.

Deadband – The difference between the setpoint and the resetpoint, normally expressed in units of the actuating variable. Sometimes referred to as differential.

Fixed Deadband – The difference between the setpoint and the resetpoint of a pressure switch. It further signifies that this deadband is a fixed function of the pressure switch and not adjustable.

National Electrical Manufacturers Association (NEMA) – This group has defined several categories of enclosures, usually referred to as "types." Further, they designate certain features and capabilities each type must include.

NEMA 6 – Enclosures constructed for either indoor or outdoor use to provide a degree of protection to personnel against access to hazardous parts; to provide a degree of protection of the equipment inside the enclosure against ingress of solid foreign objects (falling dirt); to provide a degree of protection with respect to harmful effects on the equipment due to the ingress of water (hose directed water and the entry of water during occasional temporary submersion at a limited depth); and that will be undamaged by the external formation of ice on the enclosure.

Normal Switch Position – Contact position before actuating pressure (or variable) is applied. Normally closed contacts open when the switch is actuated. Normally open contacts close when the switch is actuated.

Normally Closed – Refers to switch contacts that are closed in the normal switch state or position (unactuated). A pressure change opens the contacts.

Normally Open Switch – Refers to the contacts that are open in the normal switch state or position (unactuated). A pressure change closes the contacts.

Overpressure Rating(s) – A nonspecific term that could refer to either burst or proof pressure, or both.

Proof Pressure – The maximum pressure which may be applied without causing damage. This is determined under strict laboratory conditions including controlled rate of change and temperature: This value is for reference only. Consult factory for applications where switch must operate at pressures above nominal range or reference temperature (70°F).

Repeatability (Accuracy) – The closeness of agreement among a number of consecutive measurements of the output setpoint for the same value of the input under the same operating conditions, approaching from the same direction, for full-range traverses. *Note:* It is usually measured as non-repeatability and expressed as repeatability in percent of span or nominal range. It does not include hysteresis or deadband.

Resetpoint – The resetpoint is the Pressure value where the electrical switch contacts will return to their original or normal position after the switch has activated.

Setpoint – The setpoint is the Pressure value at which the electrical circuit of a switch will change state or actuate. It should be specified either on increase or decrease of that variable.

Single Pole Double Throw (SPDT) Switching Element – A SPDT switching element has one normally open, one normally closed, and one common terminal. The switch can be wired with the circuit either normally open (N/O) or normally closed (N/C). SPDT is standard with A-series switches.

Double Pole Double Throw (DPDT) Switching Element – Two SPDT switching elements both set to actuate or de-actuate at the same set or resetpoint. Each switch one has one normally open, one normally closed, and one common terminal. The switches are independent of each other and can be wired to two independent circuits. The two circuits can either normally open (N/O) or normally closed (N/C).

Snap Action – In switch terminology, snap action generally refers to the action of contacts in the switch element. These contacts open and close quickly and snap closed with sufficient pressure to firmly establish an electrical circuit. The term distinguishes products from mercury bottle types that were subject to vibration problems.
