# LIBERO CE

Multi-Level and Multi-Use PDF Logger with USB interface for external Pt100 Probe

LIBERO CE is the ideal PDF Logger to simplify storage and shipment process for products with known stability data. It covers a wide measurement range from -200 °C to +400 °C and monitors temperature of cell and drug deliveries with cryogenic containers, dry ice or other applications using an external Pt100 probe. Supporting up to eight temperature alarm zones, MKT and duration as alarm criteria – LIBERO CE allows you to create temperature profiles for individual products. In addition, you have the option to switch the alarming function off and on again if alarming criteria is required. This can be useful in cases where a transportation box has been cleaned, or liquid nitrogen has been refilled in a cryogenic container. LIBERO CE is reconfigurable and reusable for up to 3 years. The external Pt100 probe and M8 connector enables reliable, superior temperature data transfer to the data logger. Up to 75'500 temperature values can be stored on the data logger. LIBERO CE can be ordered with an optional stainless steel bracket. Release products with confidence based on the OK or ALARM status on the display and download the PDF report via the convenient USB interface without any additional software being required.

**we prove it.**
