$^{\circ}\text{C}_{\text{td}}$

%RH

$^{\circ}\text{C}$

---

Measurement of dewpoints in the range from  $-45\text{ }^{\circ}\text{C}_{\text{td}}$  to  $+30\text{ }^{\circ}\text{C}_{\text{td}}$

---

Testo polymer humidity sensor with high accuracy and long-term stability

Analog output 4 to 20 mA (2-wire) and optional alarm plug with 2 integrated switch outputs

---

Compact design with rotatable housing by  $350^{\circ}$  for optimum positioning of display

---

Display with operating menu (optional)

---

The testo 6740 was especially developed for trace humidity measurement in compressed or dry air (e. g. granulate dryers). Thanks to a special adjustment, optimum accuracy in the trace humidity range has been achieved.

For the display of the relevant trace humidity parameters, a freely scalable analog output is available, optionally with a switch contact plug for MAX monitoring. In addition to this, the testo 6740 stands out thanks to its compact and user-friendly design, such as the rotatability of the housing by  $350^{\circ}$  for the optimum positioning of the display.
